

JPXL

Where is the Flag?

JPXL is a relatively new file format, that is considered as an upgrade of JPG.

For example it can contain Animations.

The challenge provides us with an flag.jxl.

Let's use icat , kittens image printer, to look at the picture.

```
icat flag.jxl
```

Indeed there are three pictures animated, while one of them contains the Flag in the picture.

Mitigate

Don't assume, that attacker can't use the right tool to open a new file format;)
